

Remotely Control Rooftop and/or Split Systems

ZONE Commander

COMMUNICATING COMFORT

Control and Monitor Multiple Rooftops

A Thermal Rooftop Management System with Windows® -based Communications Software

Point and Click

... your way to temperature control and energy savings. Control rooftops, AHU's, heat pumps, zoning systems or split systems ... from anywhere!

Zonex Systems has bridged the critical gap between ineffective manual thermostat control and expensive automation systems. The ZonexCommander thermal management system offers a practical, easy way to manage 1 to 20 split or packaged systems, (per command center) with a simple click of the mouse!

It's all about simplicity

Simplicity of installation. Simplicity of operation. From the flexible 7-day programming and software lockout of thermostats to optional discharge and return air temperature sensing for every HVAC unit, the Zonex-Commander is *THE* optimum in HVAC rooftop unit control for both contractor and end user!

Windows® -Based Software

The Windows-based software is the core of the ZonexCommander thermal management

system; comprehensive yet serviceable, designed to be functional yet sophisticated. Simplicity is not just for the building operations staff, but for the service contractor as well!

On- or Remote-Site Control

From an on-site location, or remote location using a modem, service technicians can view all unit setpoints at once, with a color-keyed indication of the thermostats calling for heating or cooling. Discharge and return or mixed air temperatures are also available for display, using a SENDCOM communicating duct temperature sensor. A "snapshot" of the system's performance can be printed to verify operation at any time, with time and date indication to aid in resolving comfort control issues your customers may have.

Powerful Thermostat Management

Effective, affordable rooftop unit control . . . Virtually . . . Anywhere!

ZonexCommander is a breakthrough product at breakthrough pricing!

ZonexCommander is a low cost energy management system that controls up to 80 devices (rooftops, parking lot lights, exhaust fans and more...)

The ZonexCommander automates your HVAC system, eliminating the need to continually set and reset multiple thermostats that are located throughout a building. If you are installing multiple programmable thermostats, the ZonexCommander is a superior alternative for buildings where multiple programmable thermostats would normally be installed.

Remote monitoring and building control – at an amazing price – contact your HVAC contractor – now!

Just point and click to change schedules, setpoints, operating times, and much more.

ZonexCommander
A new way to control your building's HVAC equipment.
It's ONE HOT PRODUCT!

Contractor and Building Manager Benefits:

- Review each unit's operating conditions
- Remotely collect temperature data from any unit
- Monitor or change every zone's or unit's current room temperature on-site or from a remote location with ZonexCommander software
- Modify heating and cooling setpoints
- Establish occupied and unoccupied schedules
- Energy Star compliant – reduces energy usage and increases energy savings
- Remotely set system up or back, by unit, or globally
- Remotely lock thermostats
- Easy print and report capability with date stamp and time display
- Read discharge, supply and outdoor air temperatures from each unit in seconds
- 7-day programmability
- 20-event vacation scheduler
- Now you can effectively manage your HVAC equipment with the ZonexCommander

Simple, uncomplicated, straightforward easy to operate building automation at 50% lower costs than traditional DDC systems.

Powerful Diagnostic Tool:

- Permits on-line review of HVAC operating data
- Review rooftop performance and troubleshoot problems before dispatching a technician
- Reduce service and inspection time
- Identify developing problems before they cause equipment failures
- Central monitoring allows easy adjustment of operational parameters and reduces staff diagnostics and troubleshooting time
- Perfect upgrade for existing unmanaged rooftops or split systems

Talking Rooftops – Communicate on-site or remotely with gas/electric or heat pump units. Quickly and easily manage multiple rooftops on-site, from corporate headquarters or any remote location. Communicate instantly with every unit in your system!
